The Warmth the Sun Gives!

The Sun is a huge ball of energy whose heat allows all life on Earth to thrive! The word 'Sun' descends from the Latin word 'Sol'. It is located in the center of our solar system, and the surface is about 10,000 degrees! It creates light and energy that affects the Earth's weather, helps plants and animals survive, and even keeps us warm on chilly days. We would not survive without our Sun!

Hey Kids! Learn more about how the sun is important to life on Earth!>>>>

(Open the camera on your iPad and hold over QR code)

**Why didn't the sun go to college?
It already had 10,000 degrees!**

Bend-La Pine Schools is an equal opportunity provider.

LUNCH BITES

LUNCH BITES

Solar Energy and Solar Panels

The Sun sends out energy to Earth. Solar panels take this energy and provide electricity to power homes and businesses. They are usually placed on the roof of a building. Solar energy is a type of renewable energy. Renewable energy is better for the environment than burning coal because it doesn't produce pollution in the air. It also doesn't waste energy to produce solar power.

Hey Kids!

Follow along as Bill Nye teaches us about solar energy!
